

# Stack Your HVAC Savings

Did you know that heating and cooling account for 30% - 40% of the energy used in commercial buildings?

Learn how you can make a big impact on your costs by improving the efficiency of your existing systems or upgrading to new, energy-efficient models [here](#).

# 1

## Chiller

Replace your aging chiller with an energy efficient model to lower costs, increase savings and improve reliability.

# 2

## Direct-Expansion Air Conditioning (DX)

A/C costs are typically the largest part of your bill. Trim cooling costs with installation rebates for a new, energy efficient DX A/C unit.

# 3

## Demand Control Ventilation (DCV)

Save as much as 20% per year on HVAC energy costs.

Help your A/C operate more efficiently, resulting in lower maintenance costs, a longer life for your system and lower carbon emissions.

Ventilation also improves the indoor air quality!

# 4

## Energy Recovery Ventilation (ERV)

Reduce your A/C load by up to 20%.

Cut HVAC costs by working with your A/C system to prevent energy waste.

Ventilation also improves the indoor air quality!

# 5

## Kitchen Demand Control Ventilation

Save up to 50% in ventilation-related energy cost.

Minimize the energy required to safely ventilate your kitchen, while maximizing the ability of the hood to contain heat and smoke.

Ventilation also improves the indoor air quality!

# 6

## Thermal Energy Storage (TES)

Pay lower time-of-use rates, reduce energy demand, and minimizes the need to buy large A/C compressors to meet your cooling needs.

Because FPL understands that your business' energy costs can push you outside your financial comfort zone, we offer rebates that help offset the cost of installing a new, more efficient unit at your facility.

Find out if you qualify for FPL's HVAC rebates by contacting an [FPL program specialist](#).
